

GLOBAL IP TANDEM

Getting Started Guide

**NO LONG TERM
CONTRACTS.†
NO MINIMUMS.**

Global IP Tandem is your “Centralized” IP switching solution for SIP to SIP termination. Our solution offers you a convenient way to directly exchange both originating and terminating traffic with other member companies. We provide a “Patent Pending” switching process utilizing our SLRE or Self Learning Routing Engine technology to deliver high quality Point-to-Point connections between our member networks. The call delivery process operates independent of the PSTN thus eliminating the complicated structure of tariffs, specialized collocation and integration costs.

Global IP Tandem makes our service available to all North American (US and Canada) VoIP service Providers both regulated and un-regulated. With today's technology even TDM legacy Providers have the ability to convert their calls to SIP to avail themselves of the many benefits offered by Global IP Tandem. Visit our web site, checkout the 5 simple steps to a better bottom line, better quality of service and a simple straight forward approach to the delivery of VoIP based Termination.

Check us out today, you will be glad you did....

Global IP Tandem delivers a call termination solution that will meet your most demanding requirements.

We're uniquely positioned with our “Patent Pending” process to deliver digital termination solutions on a nationwide basis.

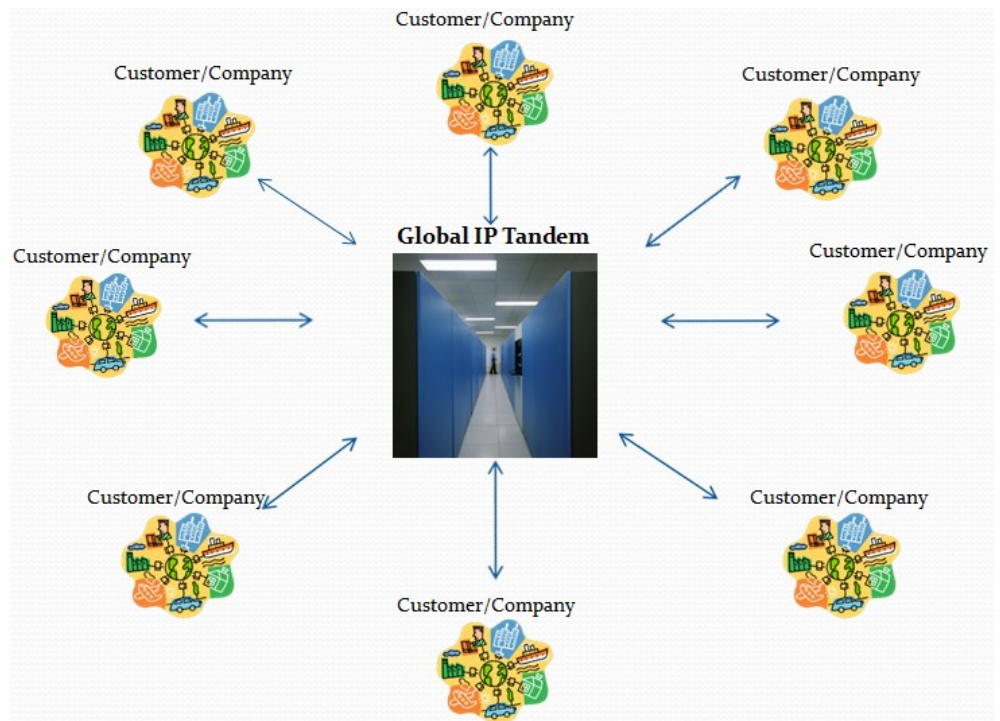

- **No Long Term Contracts†**
- **No Minimums**
- **\$0.004 MOU Flat Rate†**
- **Easy Registration**
- **No Setup Fees**

Global IP Tandem is your one stop source for exchanging digital phone traffic directly to other Global IP Tandem members. We use a "Patent Pending" switch technology called SLRE or Self Learning Routing Engine to deliver high quality "point-to-point" connections between our Member networks. The Global IP Tandem network operates independent of the Public Switched Telephone Network (PSTN) thus eliminating the complicated structure of tariffs and the costly collocation and integration expenses.

Additionally, by joining our network of Member companies, we eliminate several points of failure by avoiding typical multiple carrier connections to deliver traffic. This in turn will improve the quality of service and allow for a flat, predictable, low cost termination rate.

Our **\$0.004** MOU flat rate is provided to our member companies that originate and terminate calls in North America (US & Canada).

Our customers include both regulated and unregulated companies. Companies that originate VoIP calls or convert TDM call traffic to a digital SIP format within their network can avail themselves of the many advantages offered by Global IP Tandem. This includes VoIP Providers, VoIP Wholesalers, Cable Providers, ILEC's, CLEC's, and other ISP / ESP companies. Integration with Global IP Tandem is simple and straight forward. With the assignment of an IP address using a secured IP Tunnel you are connected and ready to enjoy the many benefits available to our participating member companies.

A CLEAR choice for your VoIP Termination...

Easy and Simple

At Global IP Tandem we are all about simplicity and ease of use. Three simple steps get you exchanging digital traffic with other member companies and two steps keep you seamlessly up and running. After all, it just isn't that hard to terminate SIP traffic to an ever growing network of member companies who are already exchanging traffic today.

Step one is your initial registration which gets the ball rolling. We first determine if your company is already registered. If not we establish a new account with you as the assigned Administrator. Next we will begin the Enrollment process. We will give you a call to identify the Finance and Engineering contacts that will be assigned to your account. This is required so we know who to speak with to setup your billing accounts and who will receive the required engineering forms to begin the integration process. Once the paperwork is signed we can begin the Testing process.

Step three, integrate the secured IP addresses that will be used to create the IP Tunnel. Once complete, we begin terminating a low volume of live calls for 5 days in order for us to test the inbound originating and outbound terminating call quality. We run QOS verification sweeps and send you a sample billing for the CDR's we have processed to ensure they match your records. That's it... we could not make it any easier if we tried. Don't forget that you will have access to great tools and reports in the Member Area, and your Finance contact will have special access to a more in depth portal allowing them to review and pay invoices.

3 Simple Steps to Begin Exchanging Traffic with Global IP Tandem.

• REGISTRATION.

- Complete a short form on our web site and you have started the money and time saving process.
- After receiving your Registration Request we will forward you your login information to the Member Area.

• ENROLLMENT.

- Provide us the contact information for the primary Finance person and the Engineering person for your account.
- We will forward the Finance person a link and login information so they can complete the Finance Enrollment Form.
- Once the forms are complete we will notify Engineering they are ready to start

• TESTING.

- Once the paperwork is out of the way its time to test.
- We will need your IP Address Schema and Domain Information to connect the secured Internet Tunnel.
- We will also need your Phone numbers and Phone Number Blocks
- 5 days of live traffic testing to ensure QoS and CDR bill processing

Our Value Proposition

Quality

- Extensive experience in deploying advanced switching technologies
- Effective reduction of multi-hop configurations thus improving QoS

Flexibility

- Switching and Billing solutions tailored to simplify the process
- Scalability—A seamless growth topology whether local or geographically diverse

Value

- A Flat Rate, cost-effective solution that will enable you to better control your operating budget
- Simple and easy to use, no long term contracts and no monthly minimums will make your day to day operations a whole lot easier

Rate Plans Starting at...

Wait a minute, at Global IP Tandem we don't have any Rate Plans, nor do we have a Rate Deck!

What we have is a very simple, very easy to follow program called a "Flat Rate" service. Global IP Tandem is proud to offer a **\$0.004** per MOU flat rate that is sure to make you smile all the way to the bank. One second billing increments, no monthly minimums and we don't lock you into a long-term contract or make you pay additional charges if your calling patterns are a bit irregular at times.

All we ask is that you **ONLY** send us VoIP or TDM calls converted to a SIP format that has **not** traversed the PSTN.

Connecting our Member networks together is what we do, and by doing so we all enjoy a better bottom line, happier customers and improved quality of service.

Don't hesitate, go to www.GlobalIPTandem.com now to begin the Registration process.
